## Full control over your hardware devices

for a perfectly personalized solution

Philips SpeechControl Device and Application Control Software gives you full control over your hardware devices. The software allows you to customize the physical buttons of your SpeechMike dictation microphone, the pedals of your foot control, as well as the application actions within your workflow and speech recognition solution.

#### Configure your devices

- Freely configure your SpeechMike's buttons and preinstalled modes for a personalized device
- Configure your mouse functionality of your SpeechMike Premium touch pad or track ball for comfortable use
- Customize your foot control for more individualized and comfortable use

#### Configure your applications

- Configure workflow applications for more convenient working
- Add and configure Dragon NaturallySpeaking speech recognition commands for even quicker transcription

#### Settings administration

- Receive notifications when new firmware upgrades are available for your device for always being up to date
- Central settings administration for quick and easy settings roll out

# Highlights

## Configure device buttons

Freely customize and assign different functions to each button and enable or disable certain features. You can make the F1 button create a new paragraph for example.

## Configure your mouse functionality

Configure your SpeechMike touch pad or trackball mouse to match your personal work preferences. You can increase or decrease the speed of your mouse cursor for example to fit your personal taste.

## Customize your foot control

Customize the pedals of your foot control to fit your individual way of working and increase comfort.

## Customize applications

Customize application commands, create hot keys or insert text to speed up your document creation process. You can for example insert a custom signature at the end of a letter with the click of a button.

## Customize speech recognition commands

Add and configure Dragon NaturallySpeaking speech recognition commands for even quicker transcription. You can make the fast forward button to a next field button for example.

## Firmware upgrade notifications

SpeechControl notifies you when new firmware updates are available for your device and allows you to download them automatically. This saves the user time and makes sure they are always up to date.

## Central settings configuration

Administrators can configure and manage settings for multiple users centrally. This convenient feature saves time and resources.
